I am exempted beacuse of my weight

Additional Information

- Last 15 years, i am working as a PHP developer in different institutions like universities, banks and newspapers.
- I started to work in 2007 at istanbul aydin university and until now i am developing educational softwares. At aydin university, i was in a team of distance education center to develop LMS (Learning Management Systems). A learning management system (LMS) is a software application for the administration, documentation, tracking, reporting and e-learning courses or training programs. LMS in Aydın University developed by PHP, MySQL, Jquery. There are 5 developer in this team. My role in that team is to develop software to take care of 1000 students in distance learning.
- In 2009 i started to work in web development team of IT department of Fatih University which has 20.000 students, 500 staffs and 2000 academic staffs. I was working in a team to develop Personel and Student Management System (PSMS) which controls all operations between professors, students and staffs. Registrations, accounting, student affairs, staff affairs, distance education, evaluation of students, course assessment etc. In that team i was in the role of PHP Web Developer. I was using PHP, MySQL, Oracle, Jquery to develop the PSMS.
- In 2011 i transfered to distance education project to develop LMS for the university. The new LMS, name of the LMS is ulearn, is integrated with PSMS using web services. The LMS serves more than 2000 students all over the world. I wrote web services to integrate ulearn with Adobe Connect which is a commercial video conferans program specificly designed for distance education. I used SSO (Single Sign On) protocol.
- I attended workshops related to distance education programs in different countries like Kazakhistan, Bosnia and England with erasmus staff exchange program. In these workshops i presented Role-Capability relations in LMS. I made many friends and i am still contact with them. When i get technical problem related to program developing i can contact with them via email or video conferans.
- I also worked on Freelance projects like Erasmus KA2 Projects, K12 School Management Systems, some webpage desings, web applications using mostly PHP, MySQL etc.
